

BE SAFE

BECOMING BETTER EQUIPPED TO SURVIVE®

This Pocket Survival Pak +PLUS™ was designed to be affordable and compact, yet equipped with the high-quality gear you need most to enable you to survive an unexpected emergency and get rescued.

To be truly useful, this kit must be with you when you need it. Always carry this Pocket Survival Pak +PLUS™ in a secure pocket on your person, where it is unlikely to be lost.

Every person in your party should have their own Pocket Survival Pak +PLUS™. It will do them no good if they become separated or lost and the survival kit is in your pocket, not theirs. We worked hard to make this personal survival kit affordable for just that reason.

This Pocket Survival Pak +PLUS™ cannot, however, contain all the equipment or supplies you might need or want in an emergency. It would be wise to also include on your person, at a minimum, the following gear that will also fit in your pockets:

1. A well-built, trustworthy **folding (pocket) knife** with a **locking blade** for safety at least 2.5 inches (64 mm) in length. The IBSK™ kits included in the **Pocket Survival Pak +PLUS™** is designed as an emergency back-up and should not be considered your primary knife. **A one-hand opening knife can be a life-saving advantage** in situations where you need to use one hand to hold onto something. **Quality matters** and you should choose a brand while you don't need to be extravagant, go for the best quality you can afford and a brand name you can trust. You might want to consider my IBSK™ line of folding knives that you can bet your life on™ (find them and other Doug Ritter™ gear at www.DougRitter.com).
2. A **pocket-sized personal shelter**: I am not a big fan of the common Mylar reflective emergency blanket. They are extremely fragile, too small and unreliable. A far better choice would be the tougher polyethylene Adventure Medical Kits Heatsheets® Survival Blanket (which is what I carry) or HeatSheets® Emergency Bivy. Other options are a Tacoma Mountain Rescue Storm Shelter™, a couple of large plastic leaf/garbage bags, an emergency plastic poncho, plastic sheeting or the like.
3. A **first aid kit** can also be a lifesaver. The pocket-size Adventure Medical Kits Ultralight 3 or Ultralight 5 would be the perfect complement to your **Pocket Survival Pak +PLUS™**.
4. Carry a Bandanna, which has many uses, and/or add a Coffee Filter (or two) to the **Pocket Survival Pak +PLUS™** to filter organic material from natural water sources.

Your **Pocket Survival Pak +PLUS™** includes a water bag and water purification tablets; however, it is always wise to carry your own personal supply of water. It is important to have a supply of water in some types of emergencies can leave you out of reach of normally available water; so always carry no less than one quart (liter) more in dry and warm or hot environments.

Your **Pocket Survival Pak +PLUS™** has room for you to add supplemental contents; personal medications should be carefully packaged and rotated on a regular basis to ensure they maintain potency. Discuss this with your doctor.

Waterproof and windproof matches can be purchased or you can waterproof your own using a thin coat of varnish or clear nail polish. Be sure to include a striker strip if the matches are not of the strike-anywhere variety. Striker strips must be kept dry or they will not work.

IMPROVING THE ODDS IN YOUR FAVOR

Never go off without leaving your trip information, including your route and the time you expect to return, with a responsible person who will contact the authorities if you do not return on time. It is always safer to travel with a companion; going solo significantly increases the risks. Dress or take clothing for the weather you might have to deal with if a storm blows in or you are forced to stay out overnight.

Even after taking the precaution of leaving trip information, on longer trips days can pass before you are missed. In many emergencies, even a few extra hours can be critical. If nobody knows you're in trouble, nobody knows to come rescue you. Cell phones and two-way radios do not work in many areas. In such instances, one of the surest ways to help shorten your survival experience or to get help quicker in an emergency is to carry a **406 MHz Personal Locator Beacon** or PLB for short.

Weighing in at only 5 - 9 ounces (0.15 - 0.25 kg) and available at prices starting under \$300, when activated a PLB sends out a coded digital emergency distress signal to orbiting satellites and Search and Rescue is notified of your predicament, including your location. No subscription is required. Rescue efforts will start immediately, though depending upon where you are, rescue can still take more time than you'd like. Meanwhile, your **Pocket Survival Pak +PLUS™** and the additional gear recommended here will help you survive until they arrive. A PLB is the most reliable compact means to call for help from the wilderness. I wouldn't venture far from civilization without one.

Your Fundamental Survival Toolkit is your brain. The Survival Instructions included in this **Pocket Survival Pak +PLUS™** are a good place to start; review them now, before putting the Pak away. You can also find these online at www.equipped.org/ppp. However, these cover only the most basic survival skills and techniques. I strongly urge you to take advantage of the many excellent survival books and manuals available to gain additional survival knowledge. Even better, taking a wilderness survival course can be both fun and a rewarding experience, giving you hands-on practice and life skills that can make a real difference in any emergency. A book or video is no substitute for hands-on experience. The confidence you gain from this knowledge also helps you develop the all-important Positive Mental Attitude, the will to survive, that will help you survive whatever life throws at you.

It can also be helpful to have practiced with the survival gear in your **Pocket Survival Pak +PLUS™** before you need to use it to save your life. To practice with the Spark-Lite™ Firestarter, use a sharp knife or scissors to cut off a 3/16-1/4 inch (5mm) piece of the tinder and fluff it up as directed (additional tinder can be ordered from: www.adventuremedicalkits.com/survival/), or a portion of a real cotton ball can be used. To practice with the Rescue Flash™ signal mirror, carefully remove the protective film from the face of the mirror and apply it to a clean glass or metal surface. Aim the mirror only at inanimate objects. After practicing with the mirror, re-apply the protective film to the mirror face before returning it to the Pak.

You can find more information on emergency preparedness and survival, survival books and courses, and independent unbiased reviews and recommendations about survival gear on **Equipped To Survive™**; www.equipped.org.
